Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Goetzke et al (US 5,328,094).

In regard to Claims 9 and 14, Goetzke et al teach a fuel distribution system for an internal combustion engine having a pump (27), an injector (10), a fuel conduit (37) in a body (11), fluidly connecting the pump (27) to the injector (10), the fuel conduit (37) is adapted for delivery of fuel at high pressure, having a first passageway (37) with a first longitudinal axis (axis of "37") and a second passageway (passageway of "16") with a second longitudinal axis (axis in passage of "16") wherein the first and second longitudinal axes intersect at an angle other than 180 degrees and an enlarged cavity has a center point at an intersection of the first and second longitudinal axes.

In regard to Claims 10-13 and 15-18, Goetzke et al also teach where the enlarged cavity is generally spherically shaped, the diameter of the enlarged cavity is at least twice the cross sectional diameter of one of the first and second passageways where the angle is about ("about" is viewed as a broad term) 90 degrees and the diameter of the enlarged cavity is at least twice the cross sectional diameter of one of the first and second passageways.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mekkes (US 3,257,078).
